Hi George,

Thanks for showing me round on Sunday and apologies for the slow reply, weather has had us up to our necks this week.

Honestly the cracking I have seen on your boundary wall and the way those patio slabs have lifted at the corner is consistent with root ingress, the same sort of thing we have seen on the other side of town where there are large old trees right up to the boundary. The corner of your wall that has moved most is the corner closest to next door's oak which I think is telling. I'd say that's where I would start looking.

BUT - and I have to be honest with you - I'm not a surveyor and I can't say for certain. To pin it on the tree properly you'd want someone with the letters after their name (a chartered surveyor or arboriculturist), or at the very least someone to dig down and look at the roots. We can put the wall and the patio right but anyone arguing in court would want a proper report.

The quote I left you the other day (invoice/quote ref TB-2025-1142) at £4,200 inc VAT still stands for the rebuild of the affected wall section, relaying the slabs and re-setting the path. Let me know when you'd like us to crack on.

Any questions just give us a ring.

Cheers,

Tim Webb
